LIQUID DEPLOYED

FINANCE SPECIAL FORCES

Liquid Deployed is building a new model of financial management for business.

Product	Financial architecture that is installed and run, not merely recommended.
Operator	The Forward-Deployed Finance Engineer (FDFE) — a finance leader who designs and launches the solutions personally (engineer and financier, two in one).
Infrastructure	Fincenter and Lab — the technology, methodology and expertise behind the specialist's work.
Monetisation	Deploying financial architecture in the business, then continuous support (operational and strategic management) through the Fincenter.

This is not just a fractional CFO.

It unites financial leadership, an engineering approach and a technology platform into one operating model.
